

Lisa - Cloud-based Lab Information System & Analytics

Lisa is a cloud-based laboratory information system that controls all aspects of your testing whilst ensuring you stay closer to your patients and medical partners. Lisa manages the entire testing process from registering samples and patients, performing tests, managing procedures, through to receiving doctor approvals and notifying your patients and medical partners of results.

Lisa is highly customizable, accessible from anywhere, and supports multiple locations so all your labs can take advantage of one unified setup.

Main features

Register Patients, Referrers & Medical Partners

- Store patients and their relevant data including medical and genomic histories, relatives and other relevant details.
- Add referrers and medical partners to facilitate test creation, billing and reporting.

Register & Track Samples

- Maintain a list of sample types, add new samples along with their respective collection dates, receipt dates, biopsy and other relevant info.
- Associate samples to patients & tests.

Perform Tests & Validate Results

- Perform tests against samples, input and validate results.
- Push tests for doctor approvals.
- Amend tests while keeping full history of every change made.
- Generate PDF reports and attach supporting documentation.
- Notify and share results with patients, medical partners and referrals.

Task Management

- Manage daily work by creating tasks and assigning them to your lab workers.
- Set a due date and get notified of task status.

Analytics & Reports

Analyze and aggregate data through customizable reports. Get a bird eye's view of tests performed, diagnosis and results.

Patient & Partner Portal

Give your medical partners and patients direct access to information relevant to them.
