

Mustanad - Multilingual Document Generation and Printing Solution

Many businesses operating in the MENA region find themselves in need to cater to local markets & laws by providing and keeping multilingual documents that are in both Arabic and English. Be it invoices, receipts, packing slips, repair sheets or warranties, many systems in use today don't support multilingual document generation or printing out of the box. Often, modifying those existing systems will prove very costly and inefficient.

Hand the complex task of generating and printing multilingual documents to TabTabGo

At TabTabGo, we have put our expertise and knowledge in the field of document generation and printing into building Mustanad.

Mustanad is a multilingual and multi-purpose document generation and printing solution. Mustanad offers the ability to integrate with external systems through both push and pull models.

Main features

Cloud Based Architecture

Mustanad is built using the latest cloud-based technologies. Customers can opt for either a cloud-hosted or on-premises solution.

Pull and Push Model

- Pull data from multiple systems at specified time intervals or trigger points
- Watch for file drops that matches a specific format or naming convention
- Receive direct calls from external systems through RESTful APIs or conventional SOAP APIs.

Customizable Workflow Engine

- Trigger translation and data mapping
- Validate and verify data
- Generate output using one or multiple predefined templates
- Determine archiving and printing parameters
- Generate documents
- Print documents
- Archive documents for later retrieval

Admin and Web Portal

- Manage mappings, printers and other aspects of Mustanad's setup
- View archived documents
- View audit trails and reports.
